

## **Water-Energy-Food-Environment (WEFE) Nexus Lecture Series**

Bakhtar University participated in an online international conference, which was held on Thursday June 10 by USAID Regional Water and Vulnerable Environment in collaboration with the Central Asia Youth for Water Network. The subject was Water, Energy, Food and Environment. Faculties of Bakhtar University, in order to have more awareness in such vital and social discussions, always take an active part and pass on what they have learned to the students. Along with, Faculties of Engineering, Economics and Journalism of West University participates in mentioned conference as well.

Mr. Richard Volk who was speaker, talked about the cultivation of agricultural products and said that the more water we have in Central Asia, the more we can produce and export, which all depends on water that fortunately Central Asia is growing faster and He added that we have to manage water for food production. He added “by 2050, we will have 10 to 30 percent less water available, on the other hand, the pressures of population growth and climate change cause the government to come together in this region and agree on a more sustainable path to manage the region's water resources .In addition, Mr. Richard Volk said that we should build proper waterways, irrigation systems, tanks, channels and dams in order to save water for next generations.
